

The CMTO considers the **Chest wall, Breasts, Inner/Upper thigh** and **Buttocks** to be a sensitive area and requires that all RMTs must get written consent before assessing or treating any of those areas. Your therapist will discuss with you your options for treatment and assessment and if those areas will be touched then you must initial the boxes on the tablet and sign the consent form before starting your assessment/treatment. If you do not want to have any of those areas touched, please communicate that to the therapist and they will alter their treatment plan to exclude them.
